Airflow Tasks

Expected Workflow
wake_up_task
↓
attend_class_task
↓
complete_assignment_task
↓
sleep_task

After setting up killercoda and opening Airflow UI,

In killercoda Terminal, run

docker exec -it airflow bash

cd /opt/airflow/dags

To open student_daily_tasks_dag.py file, run:

cat > student_daily_tasks_dag.py

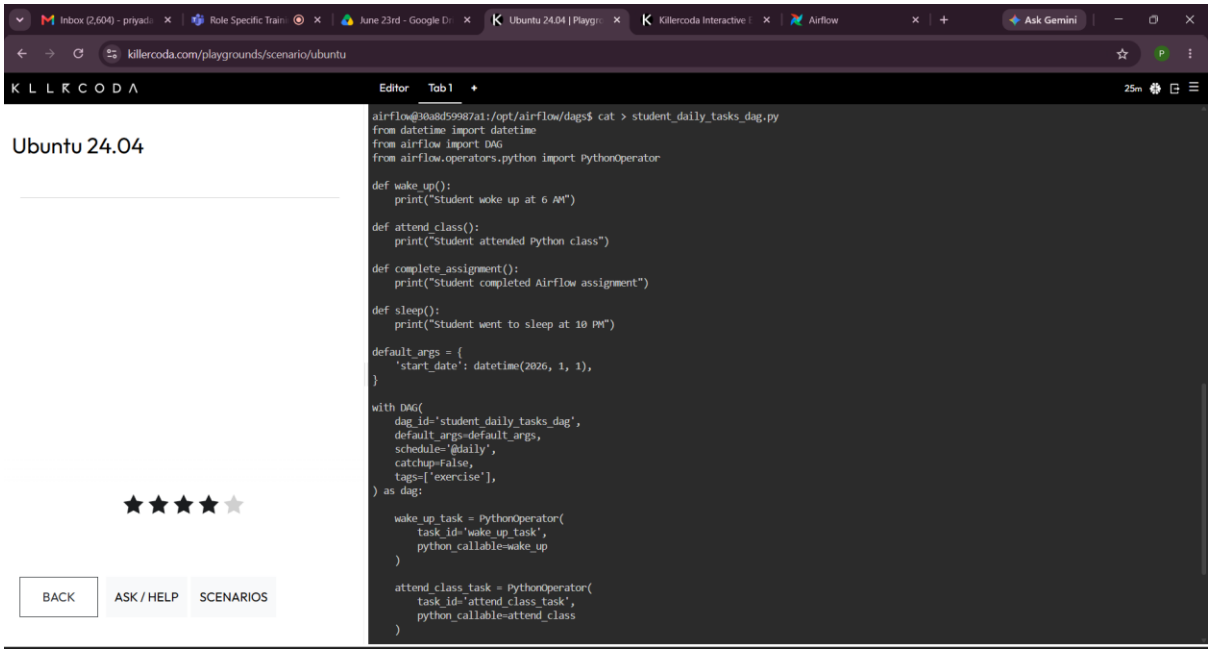
```
from datetime import datetime
from airflow import DAG
from airflow.operators.python import PythonOperator

def wake_up():
    print("Student woke up at 6 AM")
def attend_class():
    print("Student attended Python class")
def complete_assignment():
    print("Student completed Airflow assignment")
def sleep():
    print("Student went to sleep at 10 PM")
default_args = {
    'start_date': datetime(2026, 1, 1),
}
```

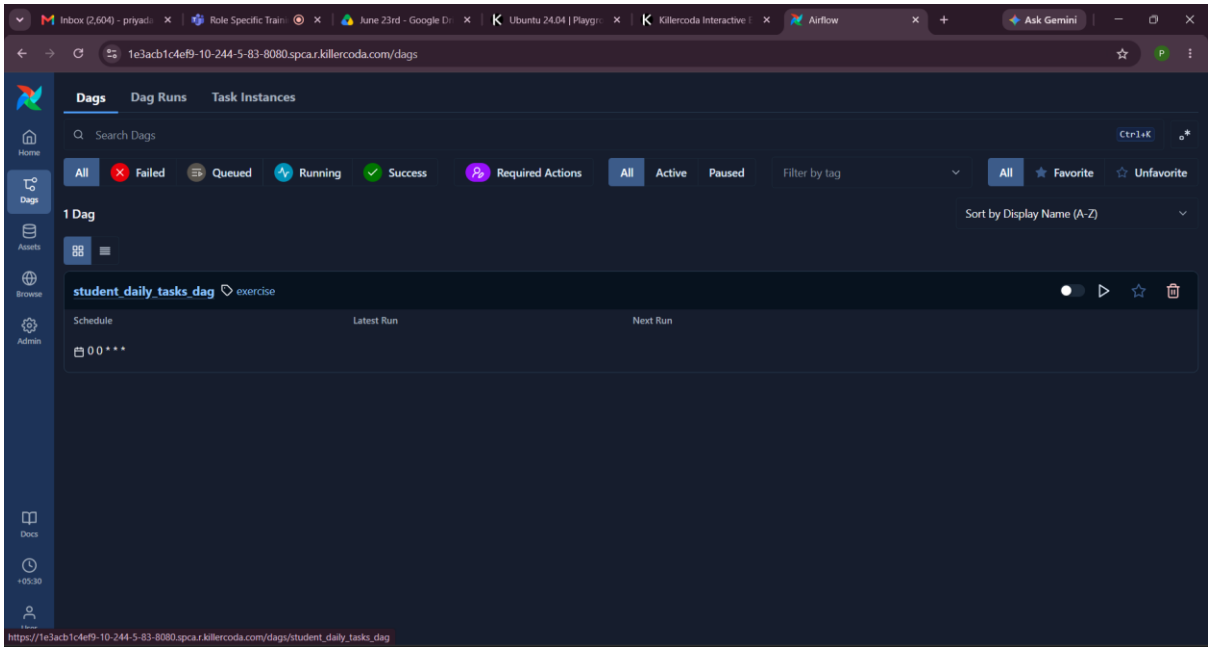
```
with DAG(
    dag_id='student_daily_tasks_dag',
    default_args=default_args,
    schedule='@daily',
    catchup=False,
    tags=['exercise'],
) as dag:
    wake_up_task = PythonOperator(
        task_id='wake_up_task',
        python_callable=wake_up
    )
    attend_class_task = PythonOperator(
        task_id='attend_class_task',
        python_callable=attend_class
    )
    complete_assignment_task = PythonOperator(
        task_id='complete_assignment_task',
        python_callable=complete_assignment
    )
    sleep_task = PythonOperator(
        task_id='sleep_task',
        python_callable=sleep
    )

    wake_up_task >> attend_class_task >> complete_assignment_task >> sleep_task
```

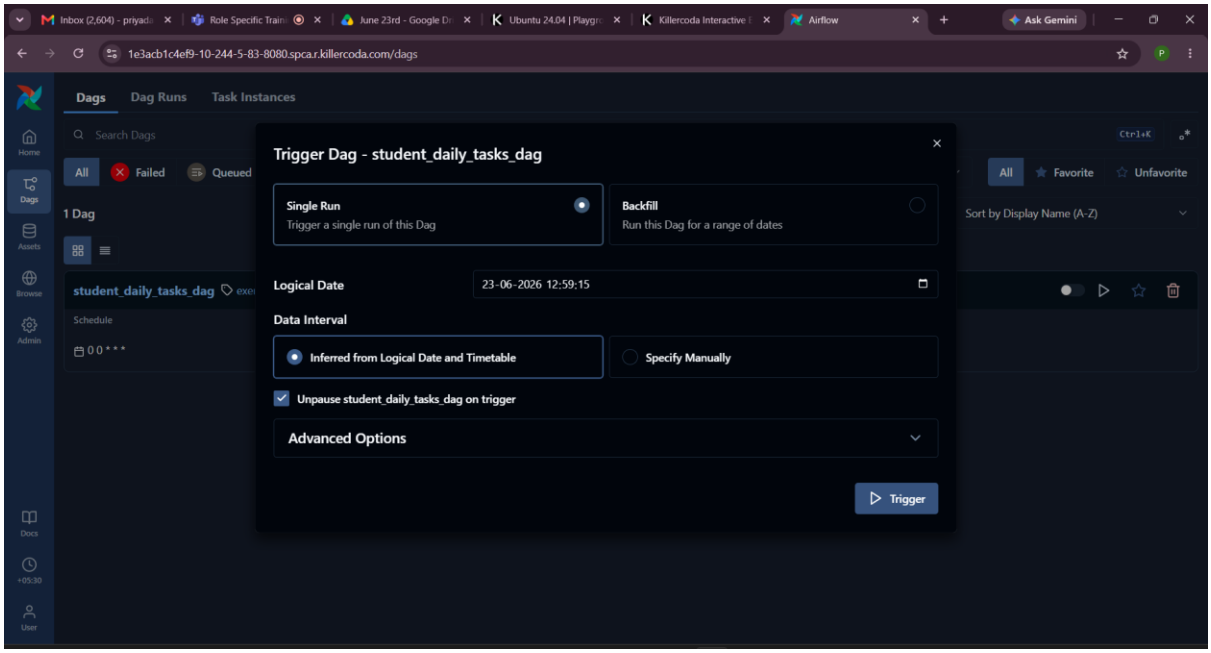
After completing the code, press **ctrl + d** to save



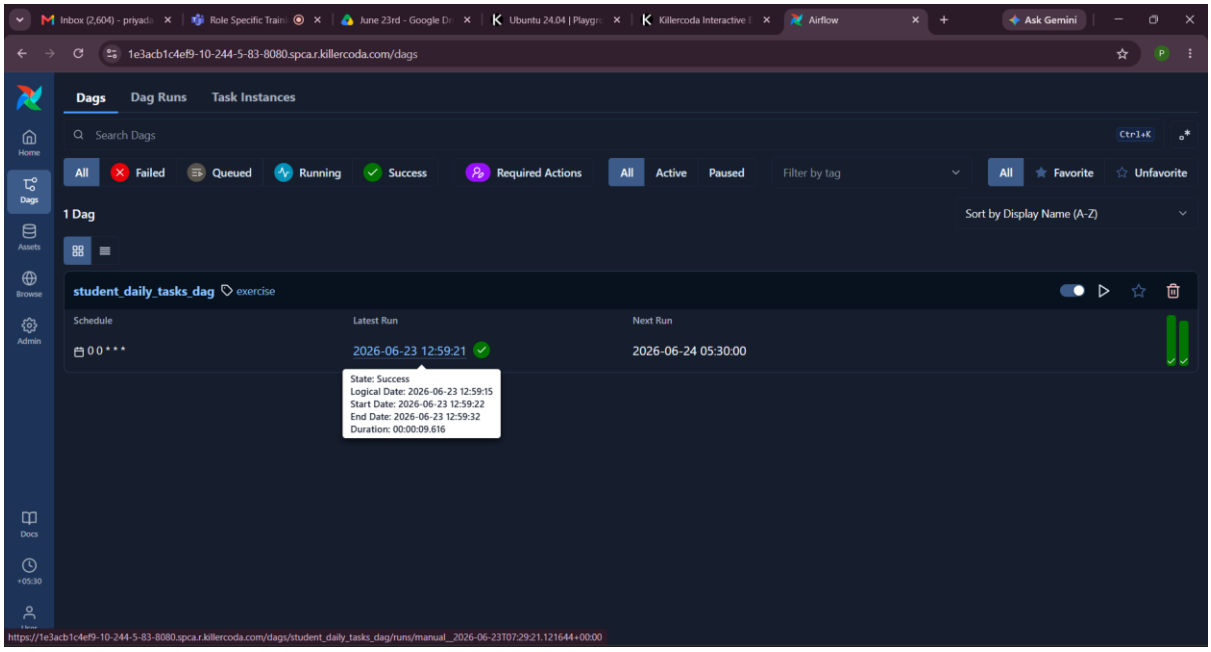
Then, refresh the Airflow UI and navigate to dags,



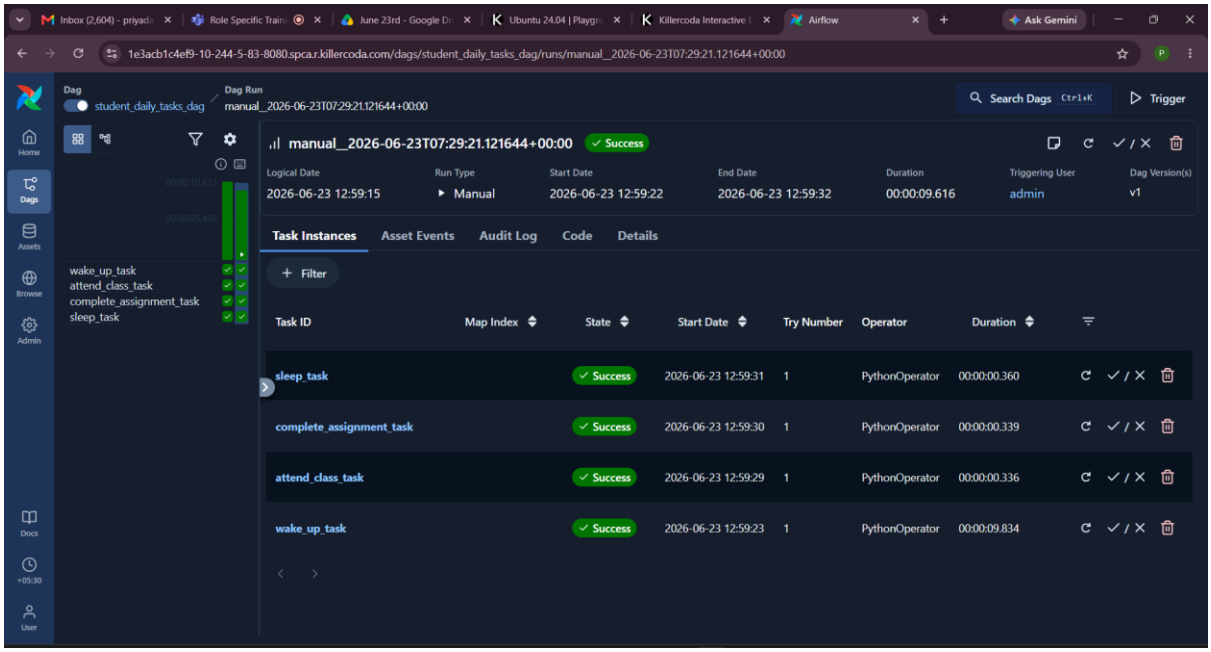
Press the run button, and click on the trigger to execute student_daily_tasks_dag



After completing the execution,



Click on the latest run to verify the execution of tasks,



Additional Task,

Add a new task:

exercise_task

with output:

Student completed morning exercise

Place it between:

wake_up_task and attend_class_task

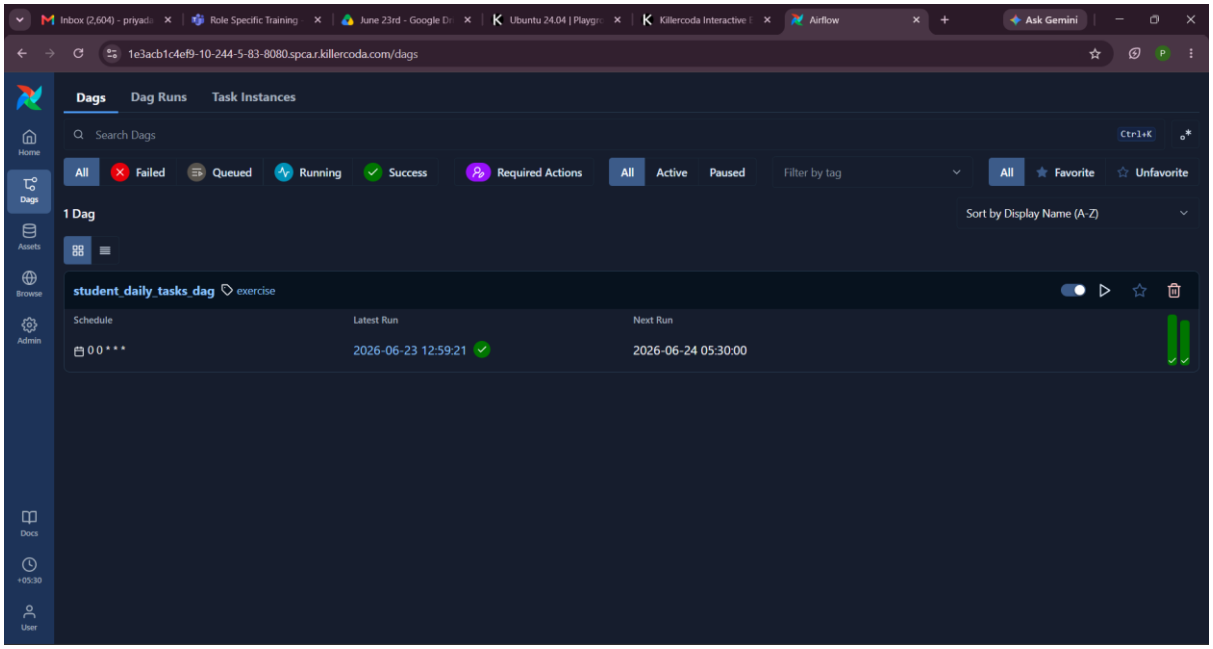
Make changes in the code of student_daily_tasks_dag.py to add this additional task,

```
from datetime import datetime
from airflow import DAG
from airflow.operators.python import PythonOperator

def wake_up():
    print("Student woke up at 6 AM")
def exercise():
    print("Student completed morning exercise")
def attend_class():
```

```
    print("Student attended Python class")
def complete_assignment():
    print("Student completed Airflow assignment")
def sleep():
    print("Student went to sleep at 10 PM")
default_args = {
    'start_date': datetime(2026, 1, 1),
}
with DAG(
    dag_id='student_daily_tasks_dag',
    default_args=default_args,
    schedule='@daily',
    catchup=False,
    tags=['exercise'],
) as dag:
    wake_up_task = PythonOperator(
        task_id='wake_up_task',
        python_callable=wake_up
    )
    exercise_task = PythonOperator(
        task_id='exercise_task',
        python_callable=exercise
    )
    attend_class_task = PythonOperator(
        task_id='attend_class_task',
        python_callable=attend_class
    )
    complete_assignment_task = PythonOperator(
        task_id='complete_assignment_task',
        python_callable=complete_assignment
    )
```

```
sleep_task = PythonOperator(
    task_id='sleep_task',
    python_callable=sleep
)
wake_up_task >> exercise_task >> attend_class_task >> complete_assignment_task >> sleep_task
```



Click trigger to execute the updated dag,
