

Meetings in Agile

Sprint Planning Meeting

A meeting held on the very first day of a new Sprint.

The Goal is to figure out exactly what the team will build over the next few weeks and how they will do it.

- How it works: The Product Owner shares the highest-priority features from the master list (Product Backlog). The development team discusses these items, estimates how much effort they will take, and moves a realistic amount of work into their current to-do list (Sprint Backlog). By the end of the meeting, everyone is aligned on the Sprint Goal.

Daily Standup Meeting (Daily Scrum)

A quick, casual 15-minute sync held at the exact same time every morning. It is traditionally done standing up to keep it short and focused.

The Goal is to keep the team completely in sync and flag any issues early.

- How it works: Each team member quickly updates the group by answering three simple things:
 1. What did I accomplish yesterday?
 2. What am I focusing on today?
 3. Is anything blocking my progress (like a technical bug or waiting on someone else)?

Sprint Retrospective Meeting

A meeting held at the very end of a Sprint, after the work is done and demonstrated.

The Goal is Continuous improvement, The focus here is entirely on the team's process, not the product itself.

- How it works: The team looks back at how they worked together over the past few weeks. Everyone openly discusses:
 - What went really well? (So that we can keep doing it)
 - What didn't go so well or caused frustration?
 - What actionable changes can we make to work better in the next Sprint?
